EQUIPMENT/ASSET IDENTIFICATION & INVENTORY

No-Cost Equipment Identification for Smarter Maintenance Decisions

STATEMENT

- All Scientific Technology is changing how equipment service relationships begin. Rather than starting with assumptions, spreadsheets, or incomplete inventories, AST begins with facts captured on site by a trained **Tagnician™**, an expert in equipment identification and asset documentation.

- Every interaction with AST is designed to deliver tangible value immediately: a verified, enriched equipment list that the end user owns and controls.

CHALLENGE

For decades, equipment owners have been asked to do the impossible:

Provide an accurate, complete list of equipment	Across multiple locations, vendors, and asset classes	Often with outdated records, missing serial numbers, or no centralized system

As a result:

- Service proposals are incomplete or inaccurate
- Preventive maintenance plans are misaligned
- Repair costs are unpredictable
- Equipment data becomes locked inside contractor-specific systems

The **root problem** is not service quality it is **data quality.**

SOLUTION OVERVIEW

AST solves this problem by **deploying a trained Tagnician™ at no cost** to the end user.

The Tagnician:

- Physically identifies and tags equipment on site
- Creates verified digital equipment profiles (Digital Twins) in AST's application
- Associate each asset with a unique Equipment ID at its exact location

Once captured, the data is enriched automatically with:

- OEM manuals
- Service bulletins
- Technical documentation
- Relevant manufacturer and industry reference data

Only after this intelligence is established does AST present service options—repair, maintenance, calibration, or certification—based on the **actual equipment in place**, not estimates.

EQUIPMENT/ASSET IDENTIFICATION & INVENTORY

No-Cost Equipment Identification for Smarter Maintenance Decisions

KEY BENEFITS

HOW IT WORKS

01 Initial Engagement

ALL Scientific Tech confirms interest in receiving a no-cost, obligation-free equipment inventory and condition assessment.

02

A customized **Implementation Plan** aligned with the clients' timelines is developed.

03 Tagnician Deployment

A trained Tagnician visits the site to identify, tag, and assess equipment condition

04 Digital Equipment Profiles Created

Each asset is assigned a unique Equipment ID and logged into the platform.

05 Data Enrichment

OEM manuals, service bulletins, and technical documentation are linked to each asset.

06 Owner Access & Control

The equipment owner accesses the data through a web portal with full export capability to Excel or a CMMS system.

07 Optional Service Planning

Using the verified equipment list, All Scientific Tech proposes a tailored repair and maintenance plan.

08 Reciprocal Ask

"The only thing we ask in return is to take a moment to review our service proposal, either for planned preventive maintenance or a time-and-materials relationship, whichever makes the most sense for your operation."

CALL TO ACTION

Allow All Scientific Technology to deliver immediate value at no cost.

Schedule a Tagnician visit to:

Capture a verified equipment inventory

Gain ownership of enriched asset intelligence

Eliminate uncertainty from future service planning

No cost. | **No obligation.** | **Just better information.**
